Project Overview

things system will allow

Existing Problems in Parcel Delivery Systems

- Parcel loss and tracking difficulties
- Incorrect delivery status updates
- Duplicate customer information
- Poor warehouse management
- Lack of centralized reporting
- Manual record-keeping inefficiencies

Proposed Solution

- A centralized logistics management platform powered by PostgreSQL.

UTHAO Provides

Customers

- Create parcel requests
- Track parcels
- View delivery history

Employees

- Receive parcels
- Manage warehouses
- Update statuses

Delivery Agents

- Receive assignments
- Complete deliveries

Managers

- Monitor operations
- Generate reports

Why PostgreSQL?

Data Integrity

- Primary Keys
- Foreign Keys
- Constraints

Data Consistency

- Transactions

Efficient Querying

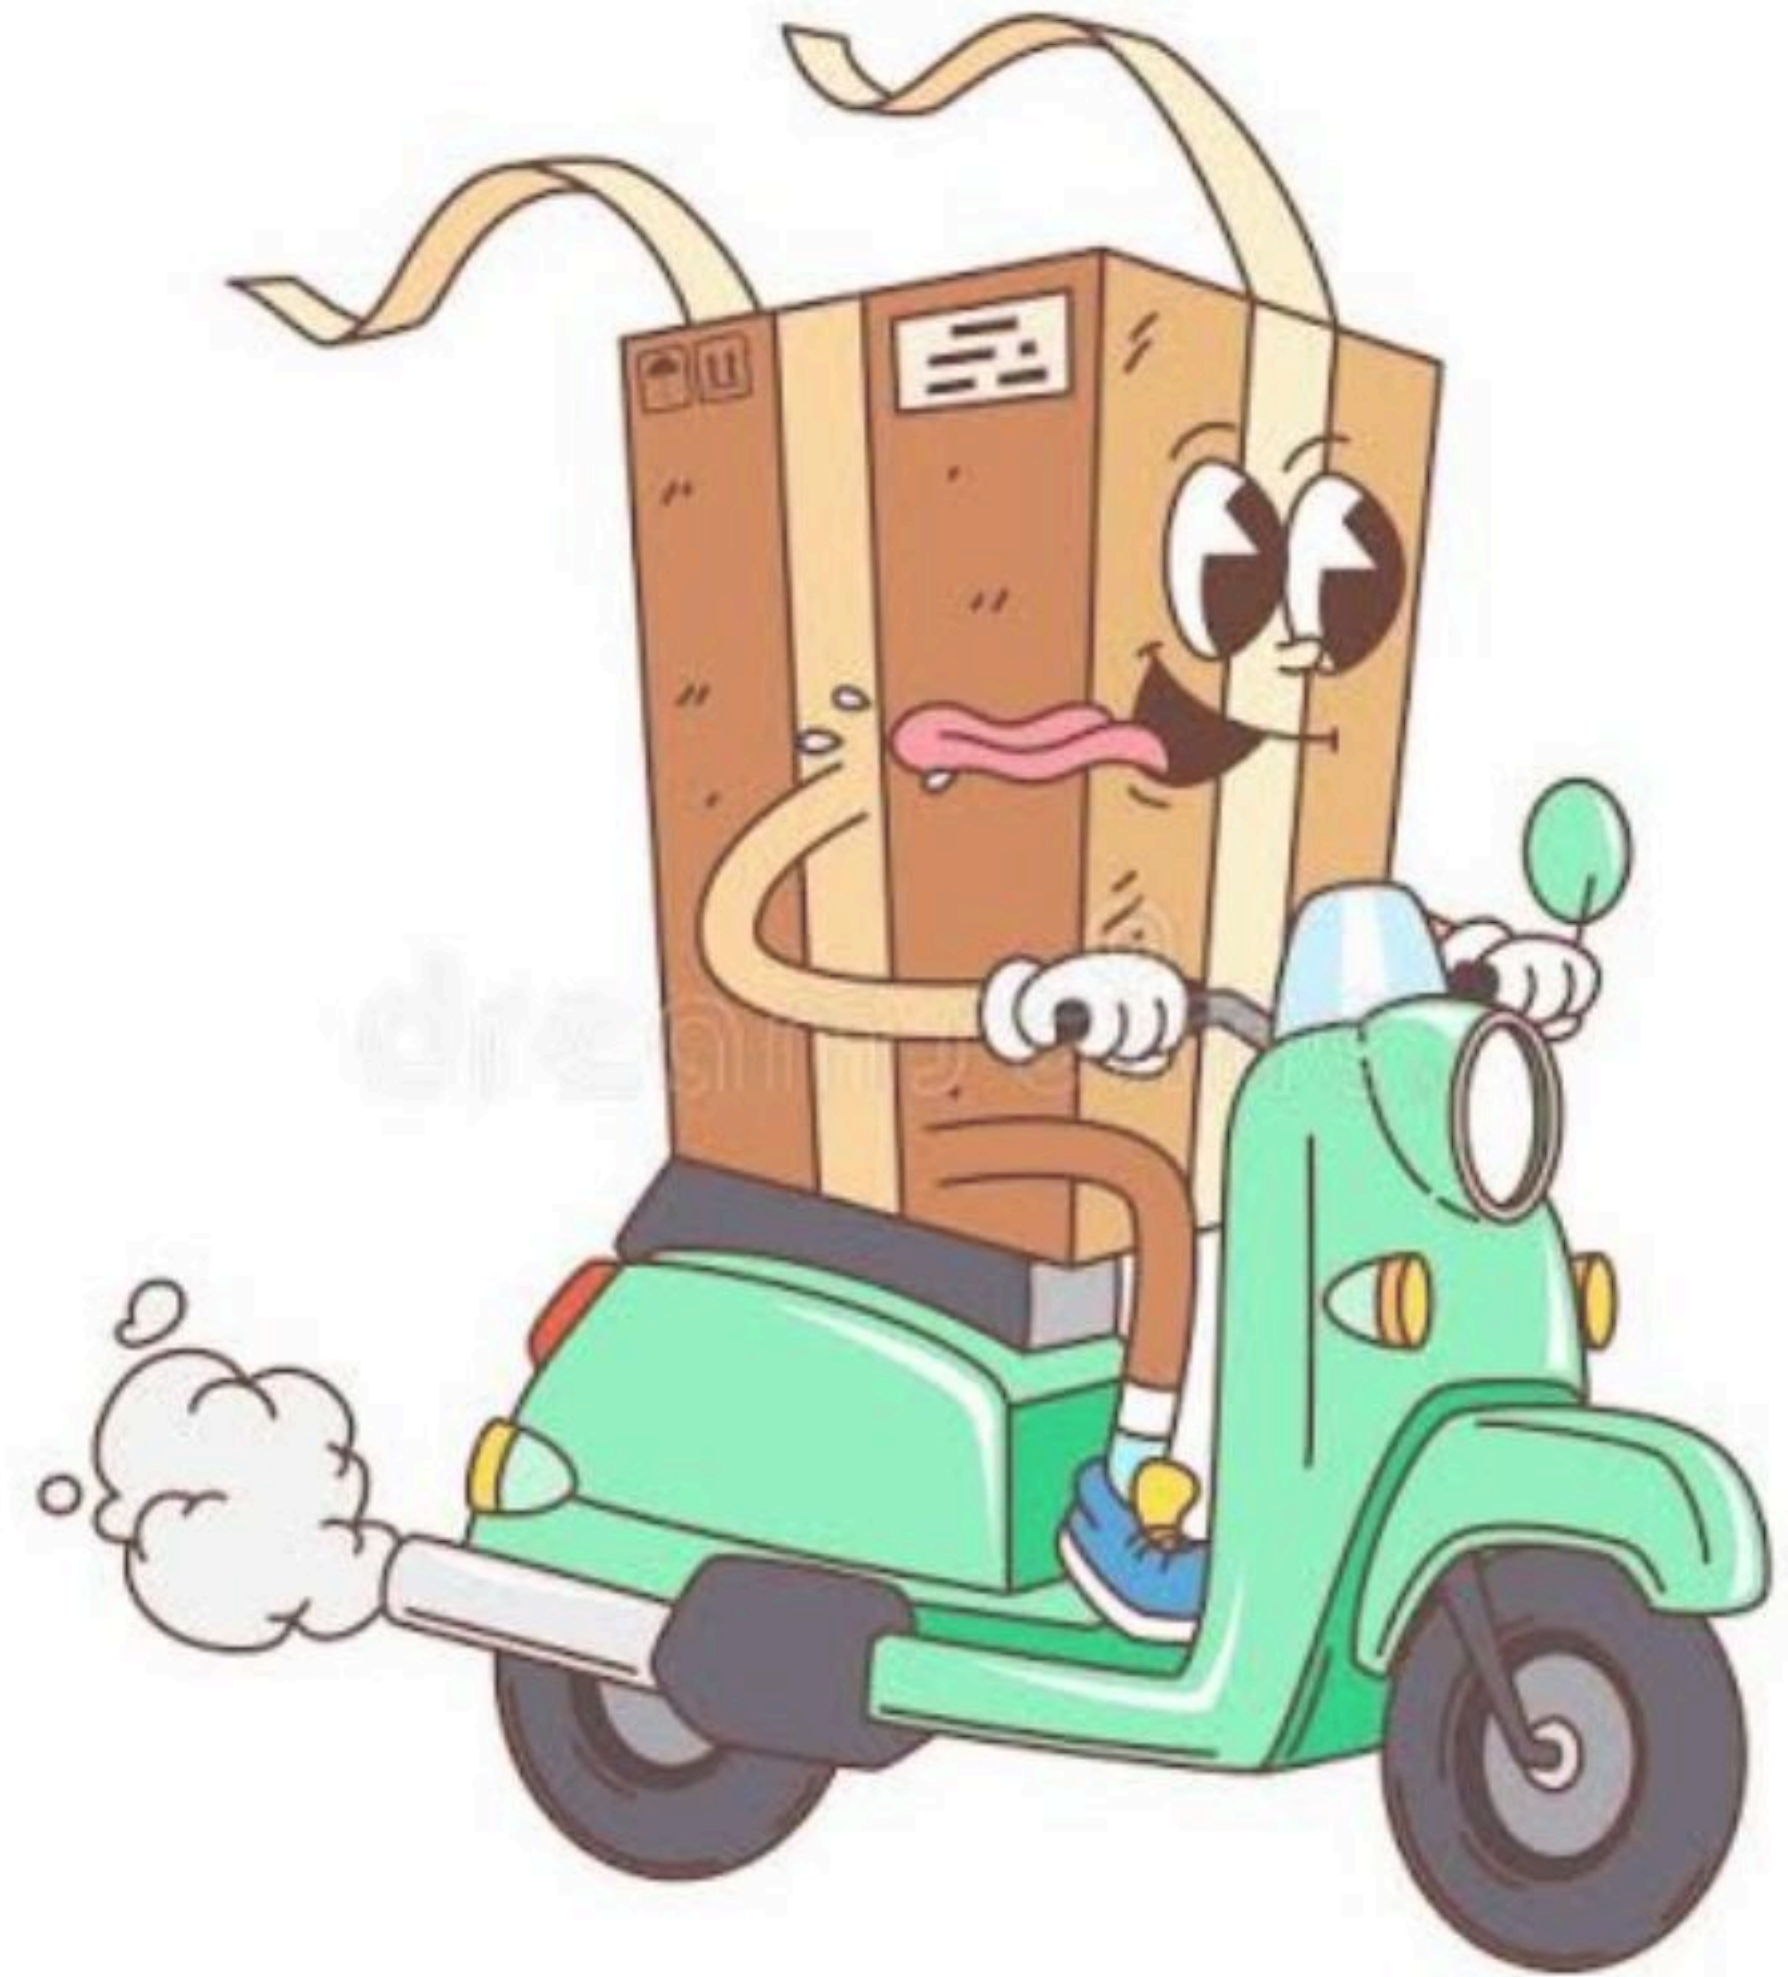

- Joins
- Indexes
- Views

Automation

- Triggers
- Procedures

Core Entities

parts of the system

Main Database Entities

- Customer
- Parcel
- Branch
- Warehouse
- Employee
- Delivery Agent
- Parcel Assignment
- Parcel Status History
- Payment

Expected Outcomes

- Centralized parcel tracking
- Reduced data redundancy
- Better warehouse management
- Automated reporting
- Improved delivery monitoring
- Efficient revenue tracking

That's All for UTHAO !
